

Dhisha Kumar

Prompt: What is one new skill or piece of knowledge you've gained this week? How do you see yourself applying this in the future?

One new skill I have developed this week was learning more about different careers software engineers can have and the qualifications needed for those jobs. Most of these jobs don't need technical experience and all it matters is your interest in the field and the drive to learn more. Being able to speak with different professionals in multiple fields as well as learning how they have used their life experiences to help them succeed in their fields was very interesting. Lastly, I learned how certain roles that may seem completely different actually help each other and work with each other to give the customer what they want.

Prompt: What is a topic that you found interesting this week? How do you plan to seek additional information and learn more about that topic?

One topic I found interesting this week was the company's involvement in AI. The seminar with Sherard Griffin was very informational and I learned more about different careers that work with AI and help develop it. My plan to seek additional help is by asking Mary to set a meeting with somebody who works and uses AI in their day to day job. My hope is to shadow this person and learn more about how to use AI to increase productivity. I will also continue to do my own research about how AI has started to be incorporated into other companies and do some work with developing some things on my own using AI.

Prompt: How is the internship meeting or not meeting your expectations/objectives and why? Do you have control of this? Explain.

This internship is meeting my expectations because my main goal was to expose myself to various fields related to business and computer science. After sitting through multiple presentations from professionals in different fields I have learned how people have ended up where they are now, and what they enjoy most about their job. I was hoping to do more shadowing of people while they were doing their jobs so what I did was ask to have a meeting set up with someone who does a lot of coding in their job. During this I learned about what he does in his job and how he uses AI to help him. After meeting with him I continued to do my own research based on the helpful tools he had given me.
