

Kieran Kelly

Prompt: *What are some of the differences you've noticed between a school environment and a professional work environment?*

I've noticed that there is more freedom in the workspace at RedHat while everybody still gets all of their work done. Back at school we are hovered over constantly and made sure we are getting our work done constantly while we have more freedom at the internship. Although we have more freedom we are still getting our work done in a timely manner. I've also noticed a large increase in group work at the internship compared to my school environment allowing me to connect with my peers better and work together more efficiently. The overall environment at my school pails in comparison to the RedHat environment in countless ways making the entire experience much more enjoyable.

Prompt: *What is a topic that you found interesting this week? How do you plan to seek additional information and learn more about that topic?*

I found the future of the AI segment of this week very fascinating and eye opening. The examples our presenter showed us really made me think about the opportunities and sheer amount of possibilities that come with AI. I intend to make many questions center around AI for the rest of the presenters and meteors I will encounter in the next week and a half. Along with that I will take the time to reach out to some of the AI focused meteors throughout the rest of my time here to have deeper and more complex conversations about my interest in AI. This will aid me in my pursuit in gaining knowledge about AI.

Prompt: *Describe a challenge you encountered during your internship and how you approached overcoming it. What did you learn from this experience?*

A challenge I encountered during my internship was coding in VS code. I am not very experienced in coding and it is by far not one of my strong suits. I was able to take advantage of my mentor and his experience of coding and help develop my website. We were able to meet during one of my interns choice sessions and he was able to help us further develop my website making it more user friendly and visually appealing. I learned many skills i had not know before while meeting with my meteor and this has been very helpful.

Prompt option 1: *What have you learned about yourself and what you want in a career?*

I've learned that I have improved my people skills and have learned how to network and make meaningful connections that I thought I might have not been able to before. This has been very helpful to learn and boost my confidence going into new situations in my life everyday. This internship has helped me carve a somewhat path of what I want my career to look like in the future. I've learned that I want to go into stock broking and business management.
