Prompt: How has your classroom experiences prepared you for the internship? What do you wish you had learned prior to the internship?

I think my classroom at school has greatly helped me prepare for this internship. I attend a project based learning school, and within that they encourage a lot of collaboration as well as presenting. With those skills i am able to translate those skills here and use them effectively.

Prompt: What is a topic that you found interesting this week? How do you plan to seek additional information and learn more about that topic?

A topic that I found interesting was today 07/10 my group had attended a session about the future of AI. It was interesting to see how AI is being used in so many different areas. I learned about the basis of AI and how the different models are integrated together to be able to solve problems. My favorite part was about how he demoed how Claude AI was able to take the information we fed it and create a basic game that we were able to play. I think the best way to get more information about this topic would be to read more articles and connect with people who are in the field.

Prompt: How is the internship meeting or not meeting your expectations/objectives and why? Do you have control of this? Explain.

This internship so far has greatly exceeded my expectations. I had the opportunity to connect with my fellow interns on a social level as well as professionally. I was able to learn so much from the various sessions on learned about the different careers Red hat has to offer.

Prompt: How has this experience affected or changed your career/college plans?

I think the opportunity has opened up doors to many different careers especially in tech. I had a set mindset on one role but seeing these roles it has allowed me to explore more because there are so many opportunities out there and it gives me an open mind.
