Christine Nguyen

Prompt: *What is one new skill or piece of knowledge you've gained this week? How do you see yourself applying this in the future?*

One new skill was learning Github and exporting files from Visual Studio Code to it. I see myself applying this in the future by expanding my Github profile and using the skills I've learned from these applications to make more projects by myself.

Prompt: *Discuss your interactions with various people during your internship and the value each relationship brings (peer interns, college mentor, session speakers, higher-level leaders).*

I've had good interactions with my peer interns trying to get through the tasks and activities each work day. The value it brings is that it forges more connections for my future. I talked a lot with my college mentor as well and it brings lots of good advice getting into college and internships while dealing with life. Listening actively to session speakers and higher level leaders let me get a glimpse into the workers of the company which was helpful.

Prompt: *Describe a challenge you encountered during your internship and how you approached overcoming it. What did you learn from this experience?*

A challenge I encountered during my internship is trying to create my website. I approached overcoming it by asking the people around me to help with different functions of my website, and using tutorials and AI to help me with making the website.

Prompt: *If you could give advice to a student starting this internship next year, what would it be?*

A piece of advice I would give to a student starting this internship would be just try to enjoy yourself and definitely put yourself out there by talking to people and making friends. There will be some parts of the internship that are enjoyable and some that they might find boring however they should try to make the best out of it as they can.
